HPE VMware Upgrade Pack 1.4.2 README

June 2021

Document History:

Released	Description
June 2021	VUP 1.4.2 superseded by VUP 1.4.2.1

Table of Contents

Overview

VMware Upgrade Pack 1.4.2 is superseded by VMware Upgrade Pack 1.4.2.1, which provides updated content described below:

- addition of firmware to support the new HPE Intel Gen10 Plus servers and HPE Persistent Memory based on Intel Optane PMEM 200 Series
- replacement of the offline version of the iLO firmware update component to match the firmware version of iLO firmware in the online firmware update component
- removal of the lsi-mr3 driver component because the 7.0 U2 image uses the in-box version of the driver

Documentation and downloads for the VMware Upgrade Pack 1.4.2 release are no longer available.
